

## $2^{\text {nd }}$ Grade

# Tier 2 Intervention Lessons 

Readiness Standard 5-1.OA.6c

Learning Target: I will subtract numbers within 10
Readiness for 2.0A.2b: Subtract numbers within 20
Session 1: Planning Guide ..... p. 4
Session 1: Re-engagement Lesson Resources ..... p. 5-10
Sessions 2 through 8: Planning Guide ..... p. 11
Sessions 2 through 8: Lesson Resources ..... p. 12-51
Independent Practice Activities: "Whose Difference is Greater?" ..... p. 52-54
Classroom Poster: Questions for Solving Word Problems ..... p. 55
Tier 1 Support Classroom Poster: Steps for Solving Word Problems ..... p. 56

## IES Recommendations for Tier 2 and 3 intervention lessons:

| 2. Instructional materials for students receiving interventions should <br> focus intensely on in-depth treatment of whole numbers in kindergar- <br> ten through grade 5 and on rational numbers in grades 4 through 8. <br> These materials should be selected by committee. | Low |
| :--- | :--- |
| 3. Instruction during the intervention should be explicit and systematic. <br> This includes providing models of proficient problem solving, verbal- <br> ization of thought processes, guided practice, corrective feedback, and <br> frequent cumulative review. | Strong |
| 4. Interventions should include instruction on solving word problems <br> that is based on common underlying structures. | Strong |
| 5. Intervention materials should include opportunities for students to <br> work with visual representations of mathematical ideas and interven- <br> tionists should be proficient in the use of visual representations of <br> mathematical ideas. | Moderate |
| 6. Interventions at all grade levels should devote about lo minutes in each <br> session to building fluent retrieval of basic arithmetic facts. | Moderate |
| 7. Monitor the progress of students receiving supplemental instruction |  |
| and other students who are at risk. | Low |
| 8. Include motivational strategies in tier 2 and tier 3 interventions. | Low |

(Institute of Educational Sciences, Assisting Students Struggling with Mathematics: Response to Intervention (RtI) for Elementary and Middle Schools, 2009, p. 6)

## Gradual release of responsibility model

Teacher Responsibility

Figure 1
(Dr. Douglas Fisher, Effective Use of the Gradual Release of Responsibility Model)

$2^{\text {nd }}$ Grade - Readiness Standard 5-1.OA.6c

Learning Target: I will subtract numbers within 10
Readiness for subtracting numbers within 20

| Recommended Actions |  |
| :---: | :---: |
| Beginning <br> (15 min.) | Review the readiness standard with the intervention group using the Guided Review <br> $>$ Introduce the learning target and why it is important for future learning <br> $>$ Read each question on the Guided Review and ask students to share what they remember from the previous school year. |
| Middle <br> (5 min.) | Ask students to reflect on their progress towards the learning target <br> $>$ What did I remember about the learning target? <br> - What did I learn today about the learning target? <br> >How confident do I feel about doing the learning target on my own? |
| $\begin{aligned} & \text { End } \\ & \text { (10 min.) } \end{aligned}$ | Assess each student's progress using Quick Check - Form A <br> Guide students to self-correct their Quick Check - Form A <br> Guide students to chart their progress by recording the date and Quick Check score in their Growth Chart <br> Collect each student's Quick Check and Growth Chart |
| After | Create sub-groups to differentiate the middle of sessions 2 through 8 <br> - Group 1 - Include students who did not meet the learning goal <br> - Group 2 - Include students who met or exceeded the learning goal |

| Beginning (5 min.) | Review the learning target with the whole group and ask each student to set a goal for today's learning |
| Middle (15 min.) | Group 1: (Students who did not meet the learning <br> goal on the previous Quick Check) Group 2: (Students who met the learning <br> goal) <br> $>$ Model solving a word problem - "I do"  <br> $>$ Guided Practice - "We do together/ $^{\text {You do together" }}$ $\quad>$Independent practice - "You do alone" |
| End (10 min.) | Bring the students back together. <br> Ask students to reflect on their progress towards the learning target <br> - What did I learn today about counting? <br> - How confident do you feel about counting on my own? <br> (Thumbs up, down, or sideways) <br> Assess each student's progress using the next Quick Check form <br> Guide students to self-correct their Quick Check <br> Guide students to chart their progress in their Growth Chart <br> - If not using Delta Math lessons, record the activity in the table <br> Collect each student's Quick Check and Growth Chart |
| After | Regroup students to differentiate the middle of sessions 3 through 8 <br> - Promote students who met the learning goal to group 2 <br> - Exit students who met the learning goal for a third time <br> Problem solve with a team to plan additional support for students who did not exit |

Session 2: Modeling (I Do)
$2^{\text {nd }}$ Grade - Readiness Standard 5 -1.OA.6c

Learning Target: I will subtract numbers within 10
Readiness for subtracting numbers within 20

Mia had 9 pencils. She gave 3 of them away. How many pencils does she have now?

Mia had 9 pencils. She gave 3 of them away. How many pencils does she have now?

I am going to think aloud to model solving this problem.
Your job is to watch, listen, think and ask questions.

First, it is important to know what the problem is about.
This problem is about Mia's pencils.
Second, I need to determine what I need to find.
I need to find the number of pencils Mia has after giving some away.
Third, I need to determine what I know.
I know that Mia had a total number of 9 pencils and she gave 3 pencils away.
Fourth, I need to figure out what I can try.
I am going to try modeling the actions with counters.
I will place 9 counters on the 10 -frame to represent the total number of pencils. (Place 9 counters red-side up on the 10 -frame counting mat.)

Next, I will take $\mathbf{3}$ counters off the $\mathbf{1 0}$-frame to represent the pencils she gave away. (Slide 3 counters off the frame.)

The $\mathbf{6}$ counters left on the $\mathbf{1 0}$-frame represent the pencils she kept.
I just showed that 9 minus 3 equals 6.
(Place the number cards under the 10 -frame to represent the subtraction problem.)
Mia now has is 6 pencils.

Last, I need to make sure that my answer makes sense.
I found that Mia now has 6 pencils. It makes sense because I knew that she started with a total of 9 and gave 3 of them away, so I modeled the problem with counters to find the unknown part.

I also know that the two parts added together must equal the total.
Can you see the addition problem, 3 plus 6 equals 9 , on the 10 -frame mat?
Anytime I need to subtract, I can think addition... 3 plus what number equals 9 ? 6

## 10-Frame Mat

Learning Target: I will subtract numbers within 10
Readiness for subtracting numbers within 20

Jayden baked 8 pies this morning. He gave away 5 pies to his neighbors. How many pies does Jayden have left?

Learning Target: I will subtract numbers within 10

Jayden baked 8 pies this morning. He gave away 5 pies to his neighbors. How many pies does Jayden have left?

I am going to think aloud to model solving this problem.

Your job is to watch, listen, think and ask questions.

First, it is important to know what the problem is about.
This problem is about Jayden baking pies.

Second, I need to determine what I need to find.
I need to find the number of pies Jayden has after giving some away.

Third, I need to determine what I know.
I know that Jayden baked a total number of 8 pies and he gave 5 pies to his neighbors.
Fourth, I need to figure out what I can try.
This time, I am going to try modeling the actions with a drawing.
I will draw 8 circles to represent the total number of pies Jayden baked.
(Draw and label 8 circles.)

Next, I will cross out 5 circles to represent the pies Jayden gave away.
(Draw "subtraction" lines through 5 circles and write the subtraction equation.)
There are 3 left, so 8 minus 5 equals 3.
$5+\ldots 3=8$
(Write the answer to the subtraction equation.)
Jayden still has 3 pies left.

Last, I need to make sure that my answer makes sense.
I found that Jayden has 3 pies left. It makes sense because I knew he made 8 pies total and gave 5 away, so I modeled the problem with a math drawing to find the unknown part.

I also know that the two parts added together must equal the total.
Can you see the addition problem, 5 plus 3 equals 8 , in the drawing?
Anytime I need to subtract, I can think addition... 5 plus what number equals 8 ? 3
(Write the "Add to Subtract" equation.)

Name $\qquad$
$\qquad$

## Session 3: Guided Practice (We Do)

Session 4: Modeling (I Do)
$2^{\text {nd }}$ Grade - Readiness Standard 5-1.OA.6c

Learning Target: I will subtract numbers within 10
Readiness for subtracting numbers within 20

Zoe had 9 beads. She had a hole in her pocket and 7 beads fell out.
How many beads does Zoe have left in her pocket?

Zoe had 9 beads. She had a hole in her pocket and 7 beads fell out. How many beads does Zoe have left in her pocket?

I am going to think aloud to model solving this problem.
Your job is to watch, listen, think and ask questions.

First, it is important to know what the problem is about.
This problem is about Zoe's beads.
Second, I need to determine what I need to find.
I need to find the number of beads Zoe had left in her pocket.
Third, I need to determine what I know.
I know that Zoe had a total of 9 beads in her pocket and 7 beads fell out.
Fourth, I need to figure out what I can try.
This time, I am going to try modeling the actions with an equation.
Since I know Zoe had a total of 9 beads in her pocket... (Write and label the total.)
And, I know that $\mathbf{7}$ beads fell out... (Write and label the known part.)
I need to take 7 away from 9. (Write the - and $=$ signs.)
I also know that I can think add to subtract.
So I will think, 7 plus what number equals 9 ? 2
(Write +2 above the 7 and then the answer.)
Zoe had 2 beads left in her pocket.

Total Beads Fell Out Left

Last, I need to make sure that my answer makes sense.
I found that Zoe had 2 beads left in her pocket. It makes sense because I knew that began with a total of 9 and 7 fell out of her pocket, so I modeled the problem with a subtraction equation to find the unknown part.
$\qquad$
$\qquad$

# Independent Practice (You Do) 

$2^{\text {nd }}$ Grade - Readiness Standard 5-1.OA.6c

Learning Target: I will subtract numbers within 10

Title of Game: "Whose Difference is Greater?"

Number of Players: 2

Objective: To be the player with the most cards at the end of the game.

## Materials:

$>$ Subtraction Problem Cards (Player 1 - set A and Player 2 - Set B)

## Directions:

> Each player shuffles their cards and places them face down in a pile.
$>$ Player 1: Flip over the top card, say the problem and the "think add to subtract" equation to find the answer.
Example:"Since $5+3=8$, then $8-5=3$ "
$>$ Player 2: Flip over the top card, say the problem and the "think add to subtract" equation to find the answer.
Example: "Since $7+2=9$, then $9-7=2$ "
> The player with the greater difference takes both cards
> Repeat until all cards have been played

## Decide the Winner:

$>$ At the end of the game, the teacher flips a coin

- If the coin lands heads up, the winner is the player with the greater number of cards
- If the coin lands tails up, the winner is the player with the lesser number of cards

Subtract Problem Cards (Set A)
