| $\begin{aligned} & \text { End } \\ & (10 \mathrm{~min} .) \end{aligned}$ | Bring the students back together. <br> $>$ Ask students to reflect on their progress towards the learning target <br> - What did I learn today about dividing a whole number by a unit fraction? <br> - How confident do you feel about dividing a whole number by a unit fraction on my own? <br> (Thumbs up, down, or sideways) <br> Assess each student's progress using the next Quick Check form <br> Guide students to self-correct their Quick Check <br> Guide students to chart their progress in their Growth Chart <br> - If not using Delta Math lessons, record the activity in the table <br> Collect each student's Quick Check and Growth Chart |
| After Session 6 | Differentiation Options: <br> - Allow students who met the learning goal to work independently while others do the guided practice during the next session <br> - Exit students who met the learning goal for a third time <br> Problem solve with a team to plan additional support for students who do not meet the learning goal within 8 sessions | Session 1: Modeling (I Do)

Learning Target: I will divide a whole number by a unit fraction
Readiness for multiplying and dividing fractions

Zach has 2 pounds of ground beef and is planning to make hamburgers. If he wants to make each hambuger equal to $\frac{1}{3}$ of a pound, how many hamburgers can he make? Session 1: Modeling (I Do - Visual Support)

Learning Target: I will divide a whole number by a unit fraction
Readiness for multiplying and dividing fractions

Zach has 2 pounds of ground beef and is planning to make hamburgers. If he wants to make each hambuger equal to $\frac{1}{3}$ of a pound, how many hamburgers can he make?

## Outline 2 wholes

## Outline parts of 1 third

Find how many parts that make 2 wholes

## Session 1: Modeling (I Do - Teacher Notes)

Learning Target: I will divide a whole number by a unit fraction
Readiness for multiplying and dividing fractions
Zach has 2 pounds of ground beef and is planning to make hamburgers. If he wants to make each hambuger equal to $\frac{1}{3}$ of a pound, how many hamburgers can he make?

I am going to think aloud to model solving this problem.
Your job is to watch, listen, think and ask questions.
First, it is important to know what the problem is about.
This problem is about Zach making hamburgers.
Second, I need to determine what I need to find.
I need to find how many hamburgers Zach can make.
Third, I need to determine what I know.
I know that he has 2 pounds of ground beef and plans to make each hambuger equal to $\frac{1}{3}$ of a pound.
Fourth, I need to figure out what I can try.
I am going to try modelling this situation using square pieces of paper.
(Hold up 2 squares connected together from the $2^{\text {nd }}$ set of squares on page 10, write 2 whole pounds on the Modeling page and outline the 2 squares with yellow highlighter.)

I will begin by folding each square into thirds to represent each hamburger.
(Fold the squares into thirds...outline and label each third using a blue highlighter.)
Each section represents 1 of the hamburgers...we need to find how many make up $\mathbf{2}$ wholes.
(Circle each label.)
I see that $\mathbf{2}$ whole pounds are made of $\mathbf{6}$ equal parts of 1 third. (Count the 6 sections.)

Last, I need to make sure that my answer makes sense.
I found that Zach could make 6 hamburgers. It makes sense because I represented the $\mathbf{2}$ pounds of ground beef with 2 paper squares and folded them into equal parts of 1 third to find how many can be made from 2 pounds.

## Whole Numbers to Divide (Set 1)

Directions: Provide each student both sets of squares for the Guided Practice.
Note: The teacher may use the two squares in the $1^{\text {st }}$ row for the Modeling problem.
(We Do Together, problems 1-4)

Whole Numbers to Divide (Set 2)
(You Do Together, problems 5-8)

 Session 3: Modeling (I Do)

Learning Target: I will divide a whole number by a unit fraction
Readiness for multiplying and dividing fractions

Zach loves to eat jellybeans, but yesterday he ate 2 cups of jellybeans and felt sick. If he ate the $\frac{1}{4}$ of a cup each time he walked by the jellybean jar, how many times did he eat jellybeans?

## Session 3: Modeling (I Do - Visual Support)

Learning Target: I will divide a whole number by a unit fraction
Readiness for multiplying and dividing fractions

Zach loves to eat jellybeans, but yesterday he ate 2 cups of jellybeans and felt sick. If he ate the $\frac{1}{4}$ of a cup each time he walked by the jellybean jar, how many times did he eat jellybeans?

$$
2 \div \frac{1}{4}=8
$$

## 2 Cups of Jellybeans

Learning Target: I will divide a whole number by a unit fraction
Readiness for multiplying and dividing fractions
Zach loves to eat jellybeans, but yesterday he ate 2 cups of jellybeans and felt sick. If he ate the $\frac{1}{4}$ of a cup each time he walked by the jellybean jar, how many times did he eat jellybeans?
I am going to think aloud to model solving this problem.
Your job is to watch, listen, think and ask questions.

First, it is important to know what the problem is about.
This problem is about Zach eating jellybeans.

Second, I need to determine what I need to find.
I need to find how many times he ate jellybeans.

Third, I need to determine what I know.
I know that he ate 2 cups of jellybeans and he ate $\frac{1}{4}$ of a cup each time he walked by the jellybean jar.

## Fourth, I need to figure out what I can try.

I am going to try using an area drawing to find how many $\frac{1}{4}$ cups are in $\mathbf{2}$ cups.
(Write the division problem above the 2 squares and outline them using a yellow highlighter.)
I will begin by separating each whole cup into the 1-quarter cup servings.
(Use the guide for drawing fractions to draw lines separating each cup into quarters, label them and outline each quarter with a blue highlighter.)
To see how many times he ate jellybeans, I will count the total number of 1-quarter servings. (Point to and count each serving.)

There are 8 1-quarter cup servings in 2 cups of jellybeans.

2 Cups of Jellybeans

Last, I need to make sure that my answer makes sense.
I found that Zach ate jellybeans 8 times. It makes sense because I represented the $\mathbf{2}$ cups using squares and separated each cup into 1 quarter equal parts to find how many of these parts equal 2 wholes.

## Guides for Drawing Fractions

Directions: Copy on cardstock and cut out 1 square per student.

Note: The sides of each square provide a guide to draw halves, thirds, fourths, sixths and eighths.
Rotate the square to use the side required for each problem.

Name

$$
2 \div \frac{1}{4}=8
$$

$$
2 \times 4=8
$$

Each whole has 4 equal parts

## Session 6: Modeling (I Do - Teacher Notes)

Learning Target: I will divide a whole number by a unit fraction
Readiness for multiplying and dividing fractions
Zach used an area drawing to find the answer to $2 \div \frac{1}{4}$. Look for structure in his drawing that would help write a multiplication problem that can be used to find the same answer.

I am going to think aloud to model solving this problem.
Your job is to watch, listen, think and ask questions.
First, it is important to know what the problem is about.
This problem is about Zach using an area drawing to divide a whole number by a unit fraction.
Second, I need to determine what I need to find.
I need to write a multiplication problem that I can use to find the same answer.
Third, I need to determine what I know.
I know that the drawing shows $\mathbf{2}$ wholes separated into equal parts of 1 fourths and the answer is 8 .
Fourth, I need to figure out what I can try.
I am going to try looking for a multiplication problem in the drawing.
I notice that there are $\mathbf{2}$ groups of $\mathbf{4}$ fourths.
(Draw a circle around each whole.)

Can you see the multiplication problem 2 times 4 is equal to 8 ?

Last, I need to make sure that my answer makes sense.
I found that multiplying the whole number by the denominator of the unit fraction will result in the same answer to the division problem. It makes sense because I can see both groups of equal parts in the math drawing. Let's see if it works for all of the guided practice problems.
$\qquad$

Title of Game: Play "Division Match-up!"
Number of Players: 2
Objective: To match your answer cards to unknown problem cards.

Materials:
> 1 set of Problem and Answer cards per group
> 1 recording sheet per player

## Set-up:

> Deal all 10 Problem cards face down in a row.
> Deal 5 Answer cards face up to each player.

## Directions:

> Player 1 goes first

- Take a card from the row of face down Problem cards and turn it face up
- Write the problem on the recording sheet
> If Player 1 has the Answer card, place it face up on top of the Problem card, take both cards and say:
"The answer to $\qquad$ is equal to $\qquad$ ."
> If Player 1 does not have the answer to the Problem card, turn the Problem card back over.
> Players $\mathbf{1}$ and $\mathbf{2}$ alternate turns. The winner is the first player to match all $\mathbf{5}$ of their cards.

## Answer Cards (Set $B_{1}$ and $B_{2}$ )

Storage Suggestions: Copy the Problem (Set B) cards and Answer (Set B) cards in two different colors. Store 1 set of each in a sealable bag for each pair of students.

| $\begin{aligned} & \text { ※゙ } \\ & \stackrel{\omega}{\omega} \end{aligned}$ | 12 | $\begin{array}{ll}18 & \\ & \\ & \\ & \\ & \\ \text { Set } B_{1}\end{array}$ |  | 24 | Set $B_{1}$ | 14 | $\mathrm{Set}_{B_{1}}$ |

## Problem Cards (Set $\mathrm{C}_{1}$ and $\mathrm{C}_{2}$ )

Storage Suggestions: Copy the Problem (Set C) cards and Answer (Set C) cards in two different colors.
Store 1 set of each in a sealable bag for each pair of students.

## Answer Cards (Set $\mathrm{C}_{1}$ and $\mathrm{C}_{2}$ )

Storage Suggestions: Copy the Problem (Set C) cards and Answer (Set C) cards in two different colors. Store 1 set of each in a sealable bag for each pair of students.

| $\begin{aligned} & \breve{~} \\ & \stackrel{\rightharpoonup}{0} \end{aligned}$ | 18 | 21 | Set $\mathrm{C}_{1}$ | 32 | Set $\mathrm{C}_{1}$ | 27 | Set $\mathrm{C}_{1}$ |

| $Q_{2}$ | What do I need to find? |
| $Q_{3}$ | What do I know? |
| $Q_{4}$ |  |
| Does my answer make sense? |  |

(1) MATH Steps for Solving Word Problems
Q. What is the problem about?

Q2. What do I need to find?

Q3. What do I know?

Q4. What can I try?
$Q_{5}$. Does my answer make sense?
